LEARNING DIARY, FRONT-END MODULE

LEARNING DIARY

30.9.2024

I started the project here. I checked what to do and followed the tutorial video on youtube and went from there. Even though the code was just html/css and some js it was still fun to do. The biggest question for me was what am I going to make. So I made a CV of my alias JeriChopper. I thought it was fun and it includes a lot of links to my social medias on the web.

01.10.2024

The biggest thing I learned on this course was the importance of classification in front-end coding. I never thought about it more specifically, but the css styling becomes much easier when every component is named with logic. Basically, I just followed along the video which is shown in the course page and did modifications of my liking. Nothing to this point caused too many issues

02.10.2024

The thing which I have not paid enough attention to which helps the readability of the code is sectioning in the html file. Even though this is a simple html code it is easy to get all messed up in the code, but the sections really helped me understand what was going on and where are we going to.

03.10.2024

Today was the same, I was just following the video which was provided in the course page and made adjustments to the code on the fly. The biggest thing I learned through out the project is the different modifications which can be made in css to improve styling of components.

07.10.2024

Last day of making the project. Making the site responsive was something which I was quite scared to do since I did not know exactly how difficult it is going to be. Gladly I followed the video and checked the media queries since they really helped in a lot of instances. Also the sizing, paddings and margins really makes a huge difference in the end product. At the end of the project I basically just wanted it to look like how I wanted. I made it so it takes color influence from faceit platform and also acts comical in a way since that was my point of this application. Even though the project itself did not take a lot of time or sweat the things I learned especially from css enhanced my skills especially in frontend development.
